Using SAP Order Management for Sourcing and Availability

Learn to use the **SAP Order Management for sourcing and availability** apps. Create and edit sourcing strategies, manage sites and site groups, and run sourcing simulations.

Related Information

[Sourcing Strategies](#)

Define sourcing strategies and configure parameters such as goals, goal values, constraints, weights, split shipments, and sites. Automatically calculated values, such as moving average and status, help evaluate sourcing strategy performance.

[Site Management](#)

With this app, you can display the sites and site groups that you can assign to your sourcing strategies. Furthermore, you can manage site groups.

[Simulation](#)

With this app, you can simulate sourcing results to evaluate and plan new sourcing strategies. For each simulation, you create a sourcing strategy and define the destination and the products for which you want to simulate the sourcing results. The simulation results then help you to understand the impact of your defined goals and to increase the quality of the actual sourcing results.
